Overview of the Assessment Plan for the Integrated Science and Business Program/Working to close the loop

ISB Steering Committee: Stephanie Douglas, John Ejnik, Dennis Kopf and Dale Splinter

Example of Program Data:

Data Analysis

Program Decisions

Example of Program Decision: Requiring all ISB students to complete SCIBUS 493 (internships) has proven to be a high impact practice with great success. Employer survey data strongly indicates students have successfully accomplished SLO 2, SLO 4, and SLO 6 by completion of degree. Program will continue to require SCIBUS 493.

Example of Program Data: Both qualitative and quantitative employer survey results for questions 5 and 6 indicate students have effective oral and written persuasive arguments from a business and science perspective. Summary: Both qualitative and quantitative employer survey results for question 10 indicate students are able to apply science and business knowledge/skills for growth in their careers throughout their lifetime and gained real world experience integrating science and business.

Example of Data Analysis: Both qualitative and quantitative employer survey results for questions 5 and 6 indicate students have effective oral and written persuasive arguments from a business and science perspective. Summary: Both qualitative and quantitative employer survey results for question 10 indicate students are able to apply science and business knowledge/skills for growth in their careers throughout their lifetime and gained real world experience integrating science and business.

Example of Assessment Tools: from "Employer Internship Survey".
