

**SUMMER SESSION 2016**  
UW-WHITEWATER

# WATERSHED SCIENCE FOR EDUCATORS

Brought to you by the Rock River Stormwater Group

**June 27 - 28, 2016**

Are you looking for fun (yet instructive) ways to teach students about watersheds and environmental stewardship? Hands-on activities that engage students are a great way to accomplish this.

Watershed Science for Educators uses physical models and a water quality field trip activity to provide training on the topics of watersheds, water quality and stormwater pollution prevention. The course will help you tailor these activities for use in your own classroom.

At the end of the course you will have an understanding of your local Rock River basin, methods to protect and improve water quality, and activities to help you share this knowledge with your students.

**Find out more information and register online at:**  
<http://www.uww.edu/ce/workshops/watershed>

**Signup Deadline: Friday, June 10**

*"The course offered a good balance of lecture, hands-on, out in the field, and computer work."*

*"I like that we did things rather than just talk about them."*

*-Feedback from past participants*
