Connecting to the UW-Whitewater Virtual Lab - VMware Horizon Client for Mac

OVERVIEW
This guide will walk you through the steps to access the UW-Whitewater virtual lab by launching the VMware Horizon software on your Mac computer.

NOTE: You must be connected to the UW-Whitewater network to complete the steps below. If you are off campus, please connect to the UWW VPN network before proceeding. Please visit uww.edu website, then search for Remote Connection (VPN) for instructions on installing and launching the UWW VPN client software.

Step 1
After successfully installing the VMware View Client on your computer, double-click the VMware Horizon Client icon located on your desktop. If you do not have an icon on your desktop, click on the magnifying glass icon located in the upper right-hand corner of your screen.

Type “vmware horizon” and select “VMware Horizon Client” from the selection window.

Step 2
If prompted to open the VMware Horizon Client application, please click Open.
Step 3
If this is the first time you are using the VMWare Horizon Client, you will need to configure the UW-Whitewater virtual lab server address. Click the **Add Server** button to do so.

If you have previously configured the VMware View Client server, please proceed to step 6.

Step 4
In the Hostname box, enter “viewconnect.uww.edu”, then click **Continue**.

Step 5
When prompted to enter a username and password, enter your Net-ID and password, then click **Continue**.

Step 6
Double-click on “General Access Lab.”
You should now be connected to the UW-Whitewater virtual lab.

Please remember to log off of the virtual lab computer when you are finished using it by clicking Start | Log off.

Trouble Downloading or Installing?
