Using UW-Whitewater Virtual Lab - VMware Horizon Client for Windows 7

OVERVIEW
This guide will walk you through the steps to access the UW-Whitewater virtual lab by launching the VMware View software on your Windows 7 computer.

NOTE: You must be connected to the UW-Whitewater network to complete the following steps. If you are off campus, please connect to the UWW VPN network before proceeding. Please see the Remote Access (VPN) page on the uww.edu website for instructions on installing and launching the UWW VPN client.

Step 1
After successfully installing the VMware Horizon Client virtual lab software, double-click the VMWare Horizon Client icon on your computer’s desktop to launch the VMware Horizon Client virtual lab software.

You can also launch the software by going to Start | type “vmware horizon” in the search bar, then select VMware Horizon Client.

Step 2
Double-click the viewconnect.uww.edu icon to start the remote virtual lab connection.
Step 3) When prompted to enter a user name and password, enter your Net-ID and password, select “UWW” as the domain, then click **Login**.

Step 4
Double-click “GA-LAB”, then click **Connect**.

A new screen will appear that will connect you to a UWW GA-Lab computer.

To disconnect from the virtual lab, click **Start** | then **Log Off**. Also remember to disconnect from the UWW VPN once done using the GA-Lab.

Trouble Downloading or Installing?
Contact the UWW Helpdesk at helpdesk@uww.edu or (262) 472-4357.
