Jessica Eddy

ICIT

Katlyn Dhein

ICIT Helpdesk Student Worker

General Goal:

The general goal of our team's action plan is to incorporate LEAP principles into TechQuest through defining LEAP for new/incoming students and working towards empowering them to become more proficient in using campus technology, knowing where to go for help, and which technology we offer. As we work towards that end, we are addressing the "Information literacy" outcome as part of the "Intellectual and Practical Skills" ELO.

Planned Actions:

- Adding a definition of LEAP in TechQuest
- Identifying learning outcomes or objectives so students understand why knowing how to use campus technology is important to their success at UW-Whitewater
- Accommodating numerous learning styles to engage as many students as possible
- Adding more information on technology training resources for students
- Exploring ways to assess the effectiveness of TechQuest (i.e. is TechQuest helping students understand the importance of knowing about campus technology, and if so, how? Are there any other type of metrics/data we could collect? How can we gain such information besides the in-course feedback survey?)
- Continuing to modify TechQuest in response to student feedback through the inclusion of videos, transcripts, and potentially more interactive elements in the long-term

Deliverables, Completed Actions:

- Thing one
- Add completed actions as necessary

Notes:

Teams, add any special notes here.
