A. GENERAL INFORMATION

TRADE NAME (COMMON NAME)
GENETRON® 502 Azeotrope

CHEMICAL NAME AND/OR SYNONYM
Chlorodifluoromethane/Chloropentafluoroethane. Synonym: Fluorocarbon 115/Fluorocarbon 22.

FORMULA
CHClF₂ /CCl₂CF₃

MOLECULAR WEIGHT
111.6 (average)

ADDRESS (No., STREET, CITY, STATE AND ZIP CODE)
AlliedSignal

CURRENT ISSUE DATE
February, 1993

B. FIRST AID MEASURES

INHALATION: Immediately remove patient to fresh air. If breathing has stopped, give mouth-to-mouth resuscitation. Give oxygen, as necessary, provided a qualified operator is available. Call a physician. Do not give epinephrine (adrenalin).

SKIN AND EYE CONTACT: Immediately bathe any frostbite (do not rub) with lukewarm (not hot) water. In the absence of water, cover with soft wool or other suitable material. Contact a physician for any low temperature burns from liquid contact. If no frostbite, immediately flush contact areas with large amounts of water to clean. In the case of eye contact, lift eyelids occasionally during washing to assist irrigation, and continue for 15 minutes. Remove any clothing contaminated with liquid material and wash before reuse.

C. HAZARDS INFORMATION

INHALATION
Vapors can asphyxiate at high concentrations by displacement of oxygen in air for breathing. Exposure to very high concentrations may produce narcosis, heart palpitations or arrhythmias. See Section K for further discussion of cardiac effects.

INGESTION
Not pertinent, since material is gaseous at normal temperatures and pressure.

SKIN
Contact with cold liquid or escaping gas can cause frostbite, indicated by pallor or redness, loss of sensation and swelling of affected areas. If no frostbite, irritation caused by defatting of tissue may be experienced.

EYES
Same effect from liquid contact as for skin.

PERMISSIBLE CONCENTRATION: AIR
(SEE SECTION J)
None established for mixture.

See Section H for PEL and TLV values for components.

UNUSUAL CHRONIC TOXICITY
None known.

BIOLOGICAL
None Established.

CC 124-444 (1/84)

NO = NOT DETERMINED
NA = NOT APPLICABLE

UNUSUAL FIRE AND EXPLOSION HAZARDS

Containers may rupture in fire due to overpressurization, releasing large volume of gas or vapor. Contact with certain metals and oxidizing materials (see Section G) may produce exothermic reactions or potential explosive combinations. Also, see hazardous decomposition products in Section G.

D. PRECAUTIONS/PROCEDURES

FIRE EXTINGUISHING AGENTS RECOMMENDED

Any standard agent -- choose the one most suitable for surrounding fire (this material itself is not flammable).

FIRE EXTINGUISHING AGENTS TO AVOID

None known.

SPECIAL FIRE FIGHTING PRECAUTIONS

When this material is involved in a fire, firefighters should wear self-contained, NIOSH-approved breathing apparatus for protection against suffocation and possible toxic decomposition products. Proper eye protection and protective clothing should be provided. Cool fire-exposed containers with large amounts of water, applied from as far a distance as possible. Water spray will help knock down gas or vapors.

VENTILATION

Ventilation should be adequate to meet ACGIH/TLV requirements and minimize exposure should material be released into the atmosphere. Provide local exhaust at filling zones and where leakage is probable. Mechanical (General) ventilation may be adequate for other operating and storage areas.

NORMAL HANDLING

Do not breathe gas; avoid contact with eyes, skin and clothing. Do not puncture or drop cylinders or expose them to open flame or excessive heat. Use authorized containers only. Follow label instructions and observe standard safety precautions for handling cylinders of compressed gases -- Reference (d).

STORAGE

Store in a cool, dry, well-ventilated area away from heat, flame or combustibles. Protect cylinder and its fittings from physical damage. Storage in subsurface locations should be avoided. Keep valve tightly closed after use and when empty. See Reference (d) for further details on storage.

SPILL OR LEAK (ALWAYS WEAR PERSONAL PROTECTIVE EQUIPMENT - SECTION E)

Using a self-contained air supply and protection against frostbite, involved personnel should attempt to close valves or repair source of leak, remove any open flames, if without risk, and provide adequate ventilation. Unprotected personnel should be removed from area.

If a large quantity is released, evacuate personnel and allow to dissipate at a rate, if possible, that will not exceed TLV limits. Any release to the environment of this material may be subject to federal and/or state reporting requirements. Check with appropriate agencies.

SPECIAL: PRECAUTIONS/PROCEDURES/LABEL INSTRUCTIONS

This product can cause serious personal injury, or death, if not handled properly. Follow OSHA regulations for compressed gases and for airborne contaminants (29 CFR 1910.101) and Reference (d) for cylinder handling.

E. PERSONAL PROTECTIVE EQUIPMENT

RESPIRATORY PROTECTION

None generally required for adequately vented work situations. For accidental or non-ventilated situations, where concentrations exceed 1000 ppm, use a self-contained breathing apparatus or supplied-air respirator, approved by NIOSH. At high concentrations, add a full facepiece.

EYES AND FACE

Under normal conditions, wear safety glasses. Where there is a probability of liquid contact, wear chemical safety goggles. Contact lenses should not be worn under such conditions.

HANDS, ARMS, AND BODY

Wear protective gloves and clothing with an impervious outer layer of MYLAR®-coated Durafab (2nd choices: PVA or neoprene) and thermal insulation underneath to prevent frostbite whenever leakage of liquid or a strong blast of gas are potential hazards. Remove immediately any wet non-impervious clothing and wash before reuse.

OTHER CLOTHING AND EQUIPMENT

Impervious boots or shoes with similar lining as for other clothing, worn under the same conditions as described above, may be advisable. Provide water source for frostbite in case first-aid is needed (see Section B).

### G. REACTIVITY DATA

**Stability**
- Unstable ☐ | Stable ☑ |

**Conditions to Avoid**
- Fires, hot surfaces, lighted cigarettes, welding. High temperatures cause decomposition, yielding toxic gases.

**Incompatibility (Materials to Avoid)**
- Strong oxidants, including halogens; hot reactive metals, such as molten aluminum, shavings of barium, lithium. It should not be exposed to alkaline earth metals, such as sodium, potassium, barium, etc. (cause exothermic reaction).

**Hazardous Decomposition Products**
- We have no actual data, but from analogy with other fluorocarbons, decomposition is expected to produce halogens, halogen acids, carbonyl halides, such as phosgene -- as well as carbon monoxide and carbon dioxide.

**Hazardous Polymerization**
- May Occur ☐ | Will Not Occur ☑ |

**Conditions to Avoid**
- None known.

### H. HAZARDOUS INGREDIENTS (Mixtures Only)

I. ENVIRONMENTAL

DEGRADABILITY/AQUATIC TOXICITY
Not considered biodegradable; 100% volatile.
Aquatic Toxicity: No data found for chloropentfluoroethane.
Chlorodifluoromethane: TLm96: over 1000 ppm. [TLm96 = Lethal concentration, 50% kill (96 hours)]

OCTANOL/WATER PARTITION COEFFICIENT
ND (100% volatile)

EPA HAZARDOUS SUBSTANCES
(CLEAN WATER ACT SEC. 311)

40 CFR
116-117

WASTE DISPOSAL METHODS (DISPOSER MUST COMPLY WITH FEDERAL, STATE AND LOCAL DISPOSAL OR DISCHARGE LAWS)
Disposal of GENETRON® 502 Azetrome may be subject to federal, state and local regulations. Users should review their operations in terms of applicable federal, state and local laws and regulations, then consult with appropriate regulatory agencies before discharging or disposing of waste material.

RCRA STATUS OF UNUSED MATERIAL IF DISCARDED
Not a "hazardous waste".

HAZARDOUS WASTE NUMBER: (IF APPLICABLE)
NA

40 CFR
261

K. ADDITIONAL INFORMATION

SECTION H - Hazard Data (Acute Effects) -- continued

Asphyxiant Effect: This material is low in toxicity at concentrations in air as high as 4% (40,000 ppm); however, when oxygen levels in air are reduced to 12-14%, symptoms of asphyxiation, loss of coordination, increased pulse rate, and deeper respiration will occur. (This information applies to the chlorodifluoromethane component and was also developed for dichlorotetrafluoroethane but not for the other component, chloropentfluoroethane. However, toxicological research indicates that the latter component is probably less toxic than dichlorotetrafluoroethane due to the greater fluorine proportion in its halogen content.)

Cardiac Effect: Published animal studies (anesthetized monkey) report that the GENETRON® 22 component reduces heart efficiency if inhaled 5 minutes at airborne concentrations of 25,000 - 100,000 ppm [Ref. (b), Section J]. [The substituted ethane component is expected to be somewhat less toxic.] A 2-year study with chlorodifluoromethane (GENETRON® 22) indicated a slight increase in salivary gland tumors (rat) at the highest level of exposure tested (50,000 ppm). There were no observable results in rats at exposure levels of 1000 ppm and 10,000 ppm, and none in mice at any dose level. No change in the current TLV of 1000 ppm has been recommended as a result of this study [ICI, Mond Div. (UK), April, 1981]. In addition, cardiac sensitization (dog) has been observed with both components at concentrations of 50,000 ppm (GENETRON® 22) and 100,000 - 150,000 ppm (GENETRON® 115). [Reference (c), Section J; and Reinhardt, C.F., as reported in ACGIH Documentation of TLVs, 5th edition.]

5. **WARNING**

DO NOT VENT TO THE ATMOSPHERE. TO COMPLY WITH PROVISIONS OF THE U.S. CLEAN AIR ACT, ANY RESIDUAL MUST BE RECOVERED.

CONTAINS GENETRON® 22, A HCFC, AND GENETRON® 115, A CFC, SUBSTANCES WHICH HARM PUBLIC HEALTH AND ENVIRONMENT BY DESTROYING OZONE IN THE UPPER ATMOSPHERE. DESTRUCTION OF THE OZONE LAYER CAN LEAD TO INCREASED ULTRAVIOLET RADIATION WHICH, WITH EXCESS EXPOSURE TO SUNLIGHT, CAN LEAD TO AN INCREASE IN SKIN CANCER AND EYE CATARACTS.

FOR ADDITIONAL INFORMATION ON THE ABOVE CHEMICALS, SEE THE MATERIAL SAFETY DATA SHEET.

**DATE:** 02-1993
