12. ECOLOGICAL INFORMATION

Introduction: This environmental effects summary is written to assist in addressing emergencies created by an accidental spill which might occur during the shipment of this material, and, in general, it is not meant to address discharges to sanitary sewers or publically owned treatment works.

Summary: Data for this material and chemically similar materials have been used to estimate the environmental impact of this material.

It has the following properties: no biochemical oxygen demand and no potential to cause oxygen depletion in aqueous systems, a low potential to affect aquatic organisms, a moderate potential to affect secondary waste treatment microbial metabolism, a high potential to affect the germination and/or early growth of some plants, a low potential to bioconcentrate. When diluted with a large amount of water, this material released directly or indirectly into the environment is not expected to have a significant impact.
