ENVIRONMENTAL EFFECTS DATA

This environmental effects summary is written to assist in addressing emergencies created by an accidental spill, which might occur during the shipment of this product, and in general, it is not meant to address discharges to sanitary sewers or publically owned treatment works.

Some laboratory test data and published data are available for the major components of this formulation. Although this product, as such, has not been tested for environmental effects, the data, mentioned above, have been used to provide the following estimates of potential environmental impact, in the event of an accidental spill: (2-11)

This chemical formulation is expected to have a moderate biological oxygen demand, and it may cause oxygen depletion in aquatic systems. It is expected to have a low potential to affect aquatic organisms, secondary waste treatment microorganisms, and the germination of some plants, and a moderate to high potential to affect the growth of some plants. The organic components of this chemical formulation are readily biodegradable. They are not likely to bioconcentrate. When diluted with a large amount of water, this formulation released directly or indirectly into the environment is not expected to have a significant impact.
