SECTION 1

SUNNYSIDE CORPORATION
225 CARPENTER AVENUE
WHEELEING, ILLINOIS 60090
(847) 541-5700
- SUNNYSIDE CORPORATION
(800) 424-9300
- CHEM TREC

Product Class: Solvent-Mixture
Trade Name: TILE ADHESIVE REMOVER

FOR INFORMATION:
(847) 541-5700

Manufacturer's Code:
NFCA HMIS:
529
Health: 2
Flammability: 1
Reactivity: 0

Product Appearance and Odor: Viscous, clear liquid with pungent odor.

SECTION 2 – HAZARDOUS INGREDIENTS

OCCUPATIONAL EXPOSURE LIMITS

*Not classifiable as a Human Carcinogen. Agents which cause concern that they could be carcinogenic for humans but which cannot be assessed conclusively because of a lack of data.

SECTION 3 – EMERGENCY AND FIRST AID PROCEDURES

Eye Contact: Move victim away from exposure and into fresh air. Flush eyes with plenty of water for at least 15 minutes while holding eyelids open. Get medical attention.

Skin Contact: Remove contaminated clothing and shoes. Flush skin with water. Follow by washing with soap and water. If irritation occurs, get medical attention. Do not reuse clothing until cleaned. Discard footwear which cannot be decontaminated.

Inhalation: Remove to fresh air. If breathing is difficult, have trained person administer oxygen. If breathing has stopped give mouth-to-mouth resuscitation. Get immediate medical attention.

Ingestion: If conscious, dilute stomach contents by giving large amounts of lukewarm water or milk, and induce vomiting. Call physician. Hospital Emergency Room or Poison Control Center immediately for proper instructions for inducing vomiting. If medical advice is unavailable, induce vomiting using syrup of ipecac. If ipecac is unavailable, induce vomiting with finger or back of spoon. Transport to medical attention immediately. Prompt action is essential.

Note to Physician: Adrenalin should never be given to persons overexposed to Methylene Chloride. Overexposure to this product can produce elevated carboxyhemoglobin levels.

Emergency Medical Treatment Procedures: Methyl Alcohol ingestion is life-threatening. Induce vomiting with syrup of ipecac. Follow emesis with moderate amounts of water orally. Symptom onset may be delayed. Ethanol therapy may be indicated.
SECTION 4 – PHYSICAL DATA

The following data represent approximate or typical values. They do not constitute product specifications.

Boiling Range: 104°F - 180°F
Evaporation Rate: Slower than ether
Weight Per Gallon: 9.675 lbs.
Solubility in Water: Water flushable, partially soluble to approx. 8.6% (vol.)

Vapor Density: Heavier than air
% Volatile By Volume: 98%

SECTION 5 – FIRE AND EXPLOSION DATA

Flammability Classification: Non-flammable liquid
Flash Point: None (Tag. Closed Cup.)
Lower Explosive Limit: 0.9% (Estimated)
Extinguishing Media: Water fog, dry chemical, foam, carbon dioxide. Do not use direct water stream. It will spread fire.
Unusual Fire and Explosion Hazards: Concentrated vapors can be ignited by high intensity ignition source. Thermal decomposition generates toxic and irritating vapors.
Special Fire Fighting Procedures: Firefighters should wear self-contained positive pressure breathing apparatus. Storage containers exposed to fire should be kept cool with a water spray, in order to prevent pressure build-up.
SECTION 6 -- HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE:

See Section 2. Note: The action level for a concentration of airborne Methylene Chloride is 12.5 ppm calculated as an 8 hour TWA.

EFFECTS OF OVEREXPOSURE:

Acute:

Excessive inhalation or ingestion may produce symptoms of central nervous system depression ranging from light-headedness to unconsciousness and death. Can cause headache, mental confusion, depression, fatigue, loss of appetite, nausea, vomiting, cough, loss of sense of balance, and blindness. Exposure of the eyes and skin may produce irritation.

Chronic:

Can cause headache, mental confusion, depression, fatigue, loss of appetite, nausea, vomiting, cough, loss of sense of balance and vision disturbances. Chronic overexposures have caused liver and kidney disease in experimental animals. Additionally, a six week inhalation study with Xylene produced hearing loss in rats. Laboratory animals exposed by various routes to high doses of Xylene have exhibited effects in liver, kidneys, lungs, spleen, heart, blood and adrenals. This product contains Ethyl Benzene. A draft report on a study conducted by the National Toxicology program states that lifetime inhalation exposure of rats and mice to concentrations of Ethyl Benzene (750 ppm) resulted in increases in certain types of cancer, including kidney tumors in rats and lung and liver tumors in mice. These effects were not observed in animals exposed to lower concentration of Ethyl Benzene (75 ppm or 250 ppm).

The draft report does not address the relevance of these results to humans.

The International Agency for Research on Cancer has evaluated ethylbenzene and classified it as a possible human carcinogen (Group 2B) based on sufficient evidence for carcinogenicity in experimental animals, but inadequate evidence for cancer in exposed humans.

ROUTES OF EXPOSURE:

Inhalation:

Major route of potential exposure. Methylene Chloride depresses the central nervous system. Carboxyhemoglobin levels can be elevated in persons exposed to Methylene Chloride and cause a substantial stress on the cardiovascular system.

Skin:

Absorption of liquid through intact skin is a possible but unlikely route of significant exposure due to irritating effects. Prolonged or repeated contact may cause irritation, defatting of skin, and dermatitis.

Eyes:

Liquid may cause pain, lacrimation and general inflammation.

Ingestion:

Unlikely route of exposure. Ingestion of methanol can cause blindness, dizziness, headache, nausea. One to two ounces of methanol can cause death. Studies in experimental animals indicate that the metabolism of Methyl Alcohol to formic acid results in metabolic acidosis and reversible or irreversible damage to the optic nerve. Ingestion of Methyl Alcohol, even in small amounts, can cause blindness and death. Onset of symptoms may be delayed for 18-24 hours. Treatment prior to onset of obvious symptoms may be lifesaving. Methanol is rapidly absorbed and emesis should be initiated early to be effective, within 30 minutes of ingestion, if possible. Administer syrup of ipecac. After the dose is given, encourage patient to take 6-8 ounces of clear, non-carbonated fluid. Dose may be repeated once if emesis does not occur within 20-30 minutes. Administration of an aqueous slurry of activated charcoal with magnesium citrate or sorbitol as a cathartic has been reported helpful.

Ethanol inhibits the formation of toxic metabolites. Ethanol therapy may prove beneficial. Maintain contact with a poison control center during all aspects of diagnosis and treatment.

Medical Conditions Aggravated By Exposure:

Acute and chronic liver and kidney disease, chronic lung disease, anemia, coronary disease or rhythm disorders of the heart.

Target Organs:

A six week inhalation study with Xylene produced hearing loss in rats. Laboratory animals exposed by various routes to high doses of Xylene have exhibited effects in liver, kidneys, lungs, spleen, heart, blood and adrenals.

Carcinogenicity:

Methylene Chloride has been identified as an animal carcinogen by NTP. IARC has concluded that there is sufficient evidence for the carcinogenicity of Methylene Chloride to experimental animals, and inadequate evidence for the carcinogenicity of Methylene Chloride to humans, resulting in an IARC classification of 2B. Methylene Chloride is listed on the IARC and NTP carcinogen lists, but not by OSHA. ACGIH classifies Methylene Chloride as an A3 animal carcinogen. Other components are not listed as carcinogens by NTP, IARC or OSHA.

Xylene is not known to be mutagenic, carcinogenic or a skin sensitizer. However, the available experimental data are limited and insufficient to assess carcinogenic potential. However, none of the solvents in this product are listed as carcinogens or potential carcinogens by the NTP, IARC or OSHA.

Developmental:

Xylene produced limited evidence of developmental toxicity in laboratory animals. Inhalation and oral administration of Xylene resulted in decreased fetal weight, increased incidences of delayed ossification, skeletal variations and resorptions.
SECTION 7 -- REACTIVITY DATA

Stability: Stable under normal conditions.

Conditions to Avoid: Heat, flame, electrical arcs, or other high temperature sources.

Incompatibility (Materials to Avoid): Avoid contacting this product with pure oxygen, alkalis, nitrogen peroxide, sodium, potassium and other oxidizers and reactive metals.

Hazardous Decomposition Products: At high temperatures this product decomposes to give off hydrogen chloride vapor and small quantities of other toxic and irritating vapors, including phosgene and chlorine.

Hazardous Polymerization: Not known to occur.

SECTION 8 -- SPILL OR LEAK PROCEDURES

Steps to be taken in case material is spilled or released: Remove ignition sources, evacuate area, avoid breathing vapor or contact with liquid. Recover free liquid or stop leak if possible. Dike large spills and use absorbent material for small spills. Keep spilled material out of sewers, ditches and bodies of water. Avoid contaminating ground and surface waters.

Waste disposal method: Send to a licensed reclaimer or incinerator. Dispose of in accordance with local, state and federal regulations.

SECTION 9 -- SAFE HANDLING AND USE INFORMATION

Respiratory Protection: Not required under normal use. Use a NIOSH approved respirator where mist, spray or vapor is generated and exceeds PEL.

Ventilation: Do not use in closed or confined space. Open doors and/or windows. Use ventilation to maintain exposure levels below occupational exposure levels (See Section 2).

Protective Gloves: Wear solvent-resistant gloves such as Viton, Polyvinyl Alcohol or Polychlorinated Polyethylene.

Eye Protection: Chemical goggles and/or face shield should be worn where splashing is possible. Contact lenses should not be worn.

Other Protective Equipment: Impervious clothing or boots, if needed. Wash contaminated clothing before reuse.

SECTION 10 -- SPECIAL PRECAUTIONS

Dept. of Labor Storage Category: Non-flammable liquid.

Hygienic Practices: Avoid contact with skin and avoid breathing vapors. Do not eat, drink or smoke in work areas. Wash hands prior to eating, drinking or using restroom.

Additional Precautions: Do not store where Zinc or Aluminum or their alloys are used.

Empty Container Warning: "Empty" containers retain residue (liquid and/or vapor) and can be dangerous. Do not pressureize, cut, weld, braze, solder, drill, grind or expose such containers to heat, flame, sparks or other sources of ignition. They may explode and cause injury or death. Do not attempt to clean since residue is difficult to remove. "Empty" drums should be completely drained, properly burned and promptly returned to supplier or disposed of in an environmentally safe manner and in accordance with governmental regulations.
SECTION 11 -- ADDITIONAL INFORMATION

This product contains the following toxic chemical(s) which are subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372:

SARA Title III Hazard Categories: Immediate (Acute) Health, Delayed (Chronic) Health, Fire.

Common Names: PVR, viscous blend of solvents/thickeners

California Proposition 65: This product contains Methylene Chloride and trace amounts of benzene, chemicals known to the State of California to cause cancer and it also contains trace amounts of Toluene, a chemical known to the State of California to cause birth defects or other reproductive harm.

TRANSPORTATION (U.S. DOT) Land transportation in packages of 119 gallons or less.

U.S. D.O.T. Proper Shipping Name: Dichloromethane Solution

U.S. D.O.T. I.D. Number: UN 1593

U.S. D.O.T. Hazardous Substance: Dichloromethane RQ 1000 lbs.
Xylene (mixed) RQ 100 lbs.
Methanol RQ 5000 lbs.
Ethyl Benzene RQ 1000 lbs.

Refer to 49 CFR for additional information. Expections or exemptions may exist for smaller quantities.
